

Renewable Resources & Responsible Mineral Supply Chains

ESG-focused mineral project coordination, compliant processing, quality control, logistics and end-to-end traceability across Peru and Ecuador.

Every step of the way — from mine identification to final delivery.

Mine • Process • Test • Transport • Deliver

Who We Are

Renewable Development Trust integrates field execution, ESG discipline, processing relationships and logistics control for mineral supply chains.

Responsible Resource Development

Identify and structure mineral opportunities with environmental and social objectives embedded early.

ESG & Regulatory Discipline

Review permits, licenses, environmental obligations and documentation before commercial commitment.

Energy Transition Integration

Support lower-impact energy pathways for mining, processing and industrial operations.

Operating model: local access + technical diligence + legal review + qualified processing + testing + logistics.

Every Step of the Way

From identification of the mine to final delivery, RDT manages the control points that qualify a supplier and protect chain of custody.

01 IDENTIFY

Identify mines, suppliers and mineral opportunities.

02 DOCUMENT

Review mining rights, licenses, permitting and compliance.

03 ASSESS

Environmental, legal and geological field review.

04 VERIFY

Each load is checked, sampled and laboratory tested.

05 PROCESS

Material is re-inspected and upgraded to specifications.

06 EXPORT

Independent testing, big-bag/container loading and port checks.

Traceable controls from source to shipment.

Mine Qualification, Permitting & Due Diligence

RDTR reviews mining potential, documentary compliance and supplier qualification before commercial execution.

-  **Geology & Sampling** Geological review, ore characterization and field assessment to confirm potential.
-  **Permits & Mining Rights** Review mining titles, mine licenses, operating permits and environmental licenses.
-  **Environmental & Legal Review** Environmental objectives, documentary compliance and legal review are integrated.
-  **Asset Review & Valuation** Due diligence support for asset sales, mine investments and valuation review.

Every truckload is tied to verified mine documentation and dispatch control.

Load Verification & Supplier

Qualification
A qualified supplier is not only a counterparty—it is a verified source, documented load and controlled handoff.

Verified Source

Mine license, supplier documentation and origin are reviewed before movement.

Checked Loads

Each load is checked, sampled and identified before dispatch.

Laboratory Testing

Testing is coordinated before movement and again at the processing plant.

Documented Handoffs

Transport, plant receipt and loading are linked to chain-of-custody records.

RDT keeps material, documentation and accountability connected.

Qualified Processing & Concentrate Specifications

RDT works with qualified, independently owned processing plants to align material preparation with customer requirements.

- Plant arrival inspection and sampling.
- Processing route matched to ore type and client specification.
- Copper concentrate targets may include 30% or 35%, depending on customer requirements.
- Gold concentrates and other mineral products can be coordinated where compliant and commercially viable.
- Independent laboratory testing completed prior to shipment.

End-to-End Traceability & Chain of Custody

Every truck, plant handoff and shipment stage is documented so physical material and paperwork remain aligned from origin to delivery.

Client visibility: counterparties can log into RDT's portfolio management system to monitor orders, lot status, documentation and shipment milestones through vessel loading.

Documented, tested and controlled mineral lots.

Transport, Packaging & Export Control

From truck dispatch to big-bag/container loading and port controls, RDT coordinates physical movement and documentary control.

TRUCK

TRUCK / INLAND

Mine-to-plant and plant-to-port trucking, staging, routing and handoffs tied to verified documentation.

BIG BAGS

BIG BAGS / CONTAINERS

Loading supervision, packaging control, lab certificates and lot traceability before shipment.

PORT

PORT / EXPORT

Independent SGS testing and spot checks at port loading before export execution.

Objective: compliant, quality-controlled handoffs between mine, plant, carrier, port and buyer.

Additional Services

Beyond mineral coordination, RDT supports commercial structuring, due diligence and investment reviews related to mines and supply chains.

Coordination Services

Sourcing, processing, testing, logistics and commercial execution.

Bonds & Guarantees

Transaction structures can include bonds or guarantees where appropriate.

Asset Sales & Investments

Due diligence support for asset sales and mine investment reviews.

Valuation Review

Valuation support focused on documentation, compliance and practical deliverability.

Environmental Objectives

Promote compliant, environmentally focused industrial activity.

Practical controls on quality, documentation, compliance and execution.

How RDT Can Help

A single platform to coordinate mineral opportunities that need credible sourcing, compliance, testing, traceability and delivery.

Local Access

Established professionals and partner networks across Peru and Ecuador.

Rigorous Qualification

Environmental, legal, geological and documentary review before execution.

Quality & Testing

Load checks, plant inspections and independent SGS verification.

End-to-End Traceability

Chain-of-custody coordination from source through vessel loading and final receipt.
